

The first RV-12 fuselage kits went out the door on October 3 -- or September 34th, depending on how you want to look at it. Jordon and Brian found that the kit fit in a box 96x39x12 inches and weighing, out the door, 238lbs. We will be working through the standing orders as fast as practical.

Now, before you start asking about empennage kits...yes, they are nearing completion. We hope to start shipping them in late November.

12 fuse kit on packing bench
