

# RV-6 WEIGHT AND BALANCE DATA QUICK REFERENCE

**NOTE:** this quick reference chart is NOT a substitute for the complete Weight and Balance information contained in Section 14 of the Builder's Manual.

**CAUTION:** the Gross Weight is established by the builder, who is considered the manufacturer.

**CAUTION:** The Aerobatic Gross Weight is set by structural limits. AEROBATIC FLIGHT SHOULD NOT BE CONDUCTED AT WEIGHTS GREATER THAN 1375 LBS nor AT CG LOCATIONS OUTSIDE THE AEROBATIC CG LIMIT

DATUM ..... 60 inches forward of the wing leading edge

## LIMITS

Design C.G. Range..... 15%-29% of wing chord OR between 68.7- 76.8 inches aft of datum.

Recommended Gross Weight..... 1650 lbs

Aerobatic Gross Weight..... 1375 lbs

Aerobatic CG Limit..... 26.5% of chord OR 75.3" aft of datum

## ARMS

Fuel ..... 70.00" aft of datum

Pilot/Passenger ..... 87.40" aft of datum

Baggage ..... 117.00" aft of datum

## DETERMINING EMPTY CG

Level the aircraft longitudinally and laterally using the longerons in the cabin area as the level reference. Weigh the airplane with the canopy closed, full oil and the fuel tanks empty. Enter the weights and distances from the datum (arm) in the chart below. Multiply weight by arm to obtain moment. Divide the total moment by the weight to determine the empty CG.

	Weight	Arm	Moment
Right Wheel			
Left Wheel			
Nose/Tail Wheel			
Total			
CG (moment divided by weight)
